Reasons for Allowance

The present invention relates to compounds and compositions of the formulas Ia and Ib in **Claim 1**, shown below. The tricyclic core is substituted at C2 with an acyl group and at C3 with an amino group. The variable **X** is either O or S, the **B** ring is a 5 or 6-membered moiety, and **R**² is a cyclic group. The combination of these substitutions affords novelty to this invention and no prior art anticipates or renders this invention obvious.

There exists no prior art for these tricyclic compounds. The potential pharmaceutical use for these compounds, outlined in the specification, is for the treatment of hyperproliferative disorders. The closest art of compounds and compositions, which may have led to the discovery of formulas Ia and Ib all have bicyclic cores.
